WORKSHOP BRIEF
INTRODUCTION TO COMPLEX GRID LAYOUT

Create a home page and a story page for Brandon Stanton art project HUMANS OF NEW YORK

INSTRUCTIONS

Write your HTML using semantic HTML5 tags such as <header>, <main>, <footer>, etc.
Apply your styles using an external CSS file.
Practice structure and style together:
Build a simple page skeleton with semantic tags.
Use web font.
Add text and placeholder content to define sections.
Create a complex maconery grid using the 12 images
Style these sections with CSS properties (colors, borders, spacing, fonts).
Duplicate the layout and add content according to content.txt.
Customize each layout with your own colors, structure and fonts. Use grids and flexbox.
If you don't have acces to a web hosting, create one (Github, hybrid, .com, ...)
Upload this worshop online on your own server space.

DELIVERABLE

A text file (.txt) containing the link to this workshop)
Each layout must demonstrate correct use of semantic tags and basic responsive CSS styling.
